

1. The next few sections contain stuff from the file "`lcommon.w`" that must be included in both "`lit.w`" and "`log.w`". It appears in file "`lcommon.h`", which is also included in "`lcommon.w`" to propagate possible changes from this `COMMON` interface consistently.

2. Declaration of the global variables or function simply declares that the variable or function exists, but the memory is not allocated for them.

```
extern int argc;      /* copy of ac parameter to main */  
extern char **argv;   /* copy of av parameter to main */
```

3. Propositions are truth-functions of elementary propositions. (An elementary proposition is a truth-function of itself.)

```
void main(void)  
{  
    printf("Hi_Herbert_and_Renate.\n");  
}
```

4. Index.*ac*: 2.*argc*: 2.*argv*: 2.*av*: 2.*main*: 2, 3.*printf*: 3.
