

1. The next few sections contain stuff from the file "`lcommon.w`" that must be included in both "`lit.w`" and "`log.w`". It appears in file "`lcommon.h`", which is also included in "`lcommon.w`" to propagate possible changes from this `COMMON` interface consistently.

2. Include the `printf` declaration.

```
#include <stdio.h>
```

3. Declaration of the global variables or function simply declares that the variable or function exists, but the memory is not allocated for them.

```
extern int argc;    /* copy of ac parameter to main */
extern char **argv; /* copy of av parameter to main */
```

4. Propositions are truth-functions of elementary propositions. (An elementary proposition is a truth-function of itself.)

```
void main(void)
{
    printf("Hi_␣Ludwig.\n");
}
```

5. Index.*ac*: 3.*argc*: [3](#).*argv*: [3](#).*av*: 3.*main*: [3](#), [4](#).*printf*: [4](#).
