

1. The details will be filled in due course. The interface of this module is included first. It is also used by the main programs.

2. Include the printf declaration.

```
#include <stdio.h>
```

3. Declaration of the global variables or function simply declares that the variable or function exists, but the memory is not allocated for them.

```
extern int argc;    /* copy of ac parameter to main */  
extern char **argv; /* copy of av parameter to main */
```

4. Coming to the definition of the global variables, when we define a variable or function, in addition to everything that a declaration does, it also allocates memory for that variable or function.

```
int argc;    /* copy of ac parameter to main */  
char **argv; /* copy of av parameter to main */
```

5. Index.

ac: 3, 4.

argc: 3, 4.

argv: 3, 4.

av: 3, 4.

main: 3, 4.
